

Infrastructure Assessment Rating Map

The infrastructure security and risk rating map is an assessment of the conditions and reliability of infrastructure within a territory. The rating is reflective of the safety, security, and regulatory standards as they relate to aviation and overland travel, and levels of access to utilities. It also includes an assessment of digital and cyber threats, the level of technology employed, and the existence of dedicated cyber security mitigation measures at the country level.

INFRASTRUCTURE ASSESSMENT RATING BREAKDOWN

EXTREME

Infrastructure is poor across most of the territory, and there are major safety concerns. Utilities provision is very unreliable or even unavailable throughout most of the territory.

HIGH

Infrastructure is underdeveloped in most of the territory, and safety standards are poor. Utilities provision is unreliable.

MODERATE

Infrastructure is adequate in urban centers but may be limited elsewhere. Utilities provision is reliable in the main urban centers, but limited in suburbs and rural areas.

LOW

Infrastructure is well-developed across much of the territory. Utilities provision is reliable in most parts of the territory.

MINIMAL

Infrastructure is of the highest standard. Utilities provision is uniformly reliable.
